What is Positive Behavior Support?

Positive Behavior Support (PBS) involves a proactive, comprehensive, and systemic continuum of support designed to provide opportunities for all students, including students with disabilities and second language learners, to achieve social, behavioral, and learning success. This is accomplished by examining the factors that impact behavior as well as the relationships between environment and behavior.

PBS is not a program or a curriculum but rather a systems approach to enhance the capacity of schools and districts to adopt and sustain the use of evidence-based practices for all students. A major advance in school-wide discipline is the emphasis on school-wide systems of support that include proactive strategies for defining, teaching, and supporting appropriate student behaviors to create positive school environments. Instead of using a patchwork of individual behavioral management plans, a continuum of positive behavior support for all students within a school is implemented in areas including the classroom and nonclassroom settings (such as hallways, restrooms). PBS also works to improve the overall school climate, decrease reactive management, maximize academic achievement for all students, integrate academic and behavioral initiatives, and address the specific needs of students with severe emotional and behavioral concerns (Center on Positive Behavioral Interventions and Supports, 2008).

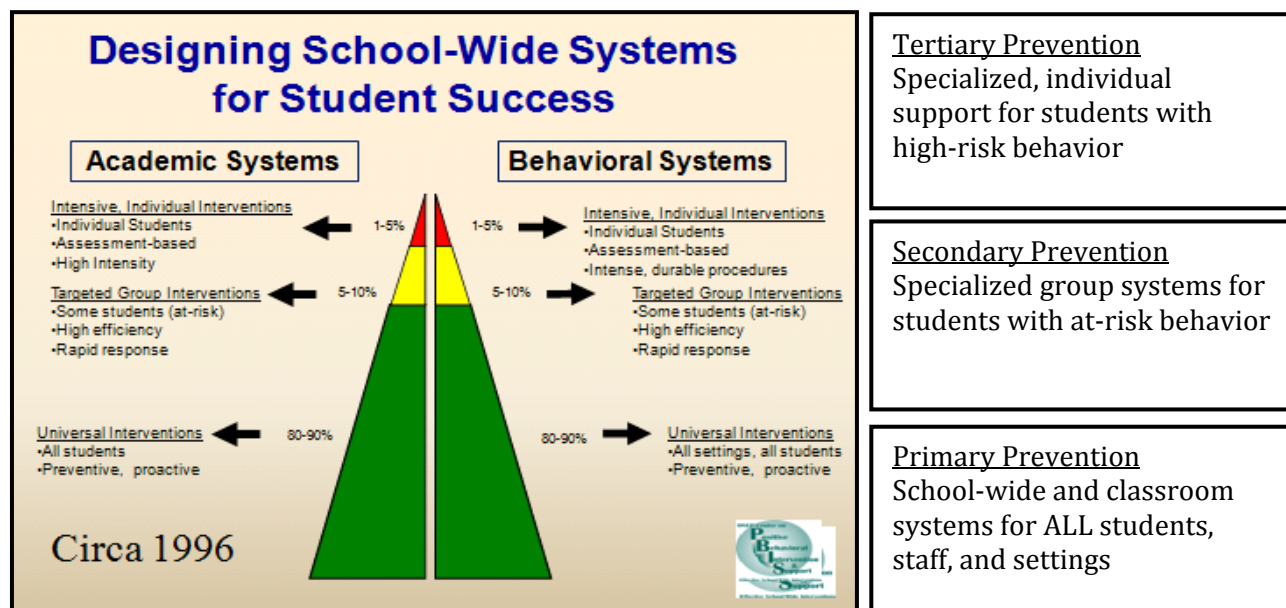

What is the purpose of School-wide Positive Behavior Support?

The main focus of **School-wide Positive Behavior Support (SW-PBS)** is to provide proactive and effective behavioral support for students at the universal level. This is accomplished when the host environment (i.e., the whole school community) establishes and maintains universal procedures that contain clear and consistent behavioral expectations. Opportunities for student success are enhanced by directly teaching universal expectations and establishing a school-wide system for reinforcing desired behavior. The necessary elements of school-wide PBS include methods to: examine needs through data; develop school-wide expectations; teach school-wide expectations; reinforce school-wide expectations; discourage problem behaviors; and monitor implementation and progress (Ibid).

School-wide Positive Behavior Support is an application of a behaviorally based systems approach to enhance the capacity of schools, families, and communities to design effective environments that improve the link between research-validated practices and the environments in which teaching and learning occur. Attention is focused on creating and sustaining **primary** (school-wide), **secondary**

(classroom), and **tertiary** (individual) systems of support that improve lifestyle results (personal, health, social, family, work, recreation) for all children and youth by making problem behavior less effective, efficient, and relevant, and desired behavior more functional (Ibid).

Continuum of School-wide Instructional and Positive Behavior Support:

Tertiary Prevention
Specialized, individual support for students with high-risk behavior

Secondary Prevention
Specialized group systems for students with at-risk behavior

Primary Prevention
School-wide and classroom systems for ALL students, staff, and settings

What is the history of Positive Behavior Support in Connecticut?

The CT State Department of Education (CSDE), through the State Education Resource Center (SERC), has been providing training, technical assistance, coaching, and evaluation to CT school districts since 2000. At that time, SERC provided professional development, on-site technical support and coaching, and networking sessions to five schools in four districts interested in initiation and implementation of PBS. Since 2005-2006, SERC has trained CT districts and schools in collaboration with the University of Connecticut and the National Technical Assistance Center on Positive Behavioral Interventions & Supports funded by the Office of Special Education Programs (OSEP). In 2007-2008 and 2008-2009, SERC trained 63 schools representing 14 districts in Year One School-wide Positive Behavior Support (SW-PBS) through the SERC/UConn collaboration. All of the schools beginning training in the 2007-2008 and 2008-2009 school years are from districts that have committed to full-district roll-out of PBS. Several of the schools involved in the 2007-2008 training cadre are participating in the training as part of their district improvement plan in response to CSDE's targeted effort to monitor and address disproportionality in the rates of suspension and expulsion for students with disabilities.

How many Connecticut districts and schools are adopting School-wide PBS?

The SERC/UConn collaboration has trained over 100 schools since 2005 (see Appendix 1.1). Schools at all grade levels, including preschools as well as elementary, intermediate, middle, high, and alternative schools, have participated in School-wide PBS training. However, the majority, approximately 75%, are elementary schools (see Appendix 1.2). Since 2000, over 27 districts have trained schools in Positive Behavior Support (see Appendix 1.3) and over 125 schools have been trained (see Appendix 1.4).

Since 2006, partnering districts have been required to establish a district team for managing district implementation and to commit to full-district involvement in PBS. As of 2008, 18 districts have made this commitment. Districts establish roll-out plans to manage the district-wide scaling up of Positive Behavior Support. Since 2000, many districts have completed training district-wide (see Appendices 1.5, 1.6, and 1.7).

Are Connecticut schools implementing School-wide PBS to criterion?

Implementation fidelity of School-wide Positive Behavior Support in Connecticut is measured annually by the *School-wide Evaluation Tool* (SET). The SET is designed to assess and evaluate the critical features of school-wide effective behavior support across each academic school year. The SET results are used to: assess features that are in place; determine annual goals for school-wide effective behavior support; evaluate ongoing efforts toward school-wide behavior support; design and revise procedures as needed; and compare efforts toward school-wide effective behavior support from year to year.

Schools in the planning phase of training (Year 1) receive a baseline evaluation during the Spring of Year 1 training. Participating schools that were evaluated for two or three consecutive years demonstrated effective roll-out of PBS during the implementation phase of training (Year 2) and sustained implementation of PBS during the maintenance phase of training (Year 3 and beyond).

Based on the SET, schools are labeled as having “met SET” or implementing to criterion when they have received a score of 80% for the measurement of *Expectations Taught* and an overall average score of 80% (Sprague & Walker, 2005). From the 2005-2006 SET evaluations to the 2007-2008 SET evaluations, schools have demonstrated growth toward meeting SET at all grade levels (see Appendices 2.1, 2.2, 2.3, and 2.4).

Are Connecticut schools sustaining implementation of School-wide PBS with fidelity?

Since 2005, 17 schools have participated in two or three consecutive SET Evaluations. Of those 17 schools, all demonstrated growth. Twelve of the 17 schools met SET during their first year of implementation (Year 2 of the evaluation). By the second year of implementation (Year 3 of the evaluation), 14 of the 17 schools had met or continued to meet SET. Of the 11 schools who met SET during Year 2 of the evaluation, only one school was unable to sustain implementation from Year 2 to Year 3 of the evaluation (see Appendices 3.1 and 3.2).

The SET evaluation provides individual schools with implementation indicators in the following measurement areas: expectations defined; expectations taught; systems to reward expectations; systems for responding to behavioral violations; monitoring decision making; management; and district support. Individual schools receive an analytical report and a data report on their SET evaluation that outline the current level of implementation in each area. District teams also receive the SET reports for their schools. Schools target areas for improvement and individually have demonstrated growth and maintenance of effective systems in all SET measurement areas over time (see Appendices 3.3, 3.4, 3.5, and 3.6).

Is School-wide PBS resulting in positive outcomes for Connecticut students?

Connecticut schools and districts are experiencing positive outcomes in response to their initiation and implementation of School-wide Positive Behavior Support. This is evidenced by data collected, analyzed, and submitted via three online data collection and management systems: the *School-wide Information System* (SWIS), *PBS Surveys* (www.pbssurveys.org), and *PBS Eval* (www.pbseval.org), as well as through the personal testimony of the Principals implementing SW-PBS in their schools. As one local Principal reports:

"I am a big advocate of the PBS system. Through involving staff in the defining, structuring, and implementation of each component of the process, we have had a measurable impact on our referral rate, which dropped 35% in the first year and has remained there in year two. We plan to keep PBS in place and continue to refine and extend our efforts. Every school should go through the process."

Michael Litke, Principal
O'Brien Elementary School
East Hartford Public Schools

Office Discipline Referral Rates:

Research indicates that office referrals for discipline decrease on average 40-60% (Sugai & Horner, 2001) when schools implement PBS effectively. Students with behavioral concerns receive increased positive support through behavior interventions, which focus on the teaching and reinforcement of appropriate behaviors and skills development and thus the prevention of behaviors of concern.

Connecticut-trained schools that are utilizing the SWIS database and have been evaluated using the SET have demonstrated clear reductions in office discipline referrals as a result of PBS implementation to criterion. At the K-6, 9-12, and K8-K12 grade levels, schools that have met SET have fewer office discipline referrals per day per 100 students than schools that have trained in PBS but have not met SET in the same grade ranges (see Appendices 4.1A, 4.1B, 4.1C, and 4.1D). Additionally, schools in the grade range of 6-9 who are implementing PBS to criterion based on the *Team Implementation Checklist* (TIC), a self-evaluation tool used for ongoing progress monitoring, have fewer office discipline referrals per day per 100 students than schools who are not yet implementing PBS to criterion based on the TIC in the same grade range (see Appendix 4.1E).

Individually, Connecticut schools have demonstrated significant reductions in office discipline referrals over time as a result of PBS implementation. Data figures from SWIS that show average referrals per day per month over multiple years are promising at all grade levels (see Appendices 4.1F,

4.1G, 4.1H, 4.1I, 4.1J, 4.1K, 4.1L, and 4.1M). When collected in SWIS, total referrals have reduced for students with disabilities in addition to their general education peers (see Appendix 4.1N).

Suspension and Expulsion Rates:

Research indicates that suspension and expulsion are the most common responses to severe problem behavior in schools (Lane & Murakami, 1987; Patterson, Reid & Dishon, 1992), yet exclusion and punishment are ineffective at producing long-term reduction in problem behavior (Costenbader & Markson, 1998; Walker, et al., 1996). Educators and families have an increasing understanding that punishing problem behaviors, without a proactive support system, is inadequate and results in increases in aggression, vandalism, truancy, and dropping out (Mayer, 1995; Mayer & Sulzer-Asaroff, 1991).

Many PBS schools in Connecticut have experienced a reduction in out-of-school suspension, in-school suspension, and expulsion rates. The reduction in frequency of suspensions and expulsions is also seen for students with disabilities. Data from SWIS and from school-based data systems show that overall rates of suspension have been reduced dramatically at many PBS sites (see Appendices 4.2A, 4.2B, and 4.2C). The reductions have been sustained for multiple years. Rates of aggression at one middle school in Connecticut were measured during three years of PBS training and implementation. This school observed instances of aggression drop in the third year of implementation to almost one-quarter of the instances from the first year of data collection (see Appendix 4.2D). Aggression was defined as physical acts that result in injury or emotional distress of another person (see Appendix 4.2D for a detailed definition).

Academic Achievement:

Improvements in student behavior and school climate are related to improvement in academic outcomes (Fleming, et al., 2005; McIntosh, et al., 2006; Nelson, et al., 2006). Problem behavior is the single most common reason why students are removed from regular classrooms. Schools that implement system-wide interventions report increased time engaged in academic activities and often experience improved academic performance due to increased time on task. Reduction in office discipline referrals results in increased time in instructional settings for students. Effective school-wide systems of behavior support provide clear and consistent discipline procedures and enhance adult capacity to manage inappropriate behavior using a function-based approach. Building behavior management capacity and classroom systems for behavior management through School-wide PBS increases instructional time in classroom settings.

Connecticut schools recently began observing academic patterns related to implementation of Positive Behavior Support. Early data are promising from a district that began tracking the relationship in 2006. In this elementary school, reading is taught using the *Open Court Reading*® (SRA/McGraw-Hill) program. *DIBELS* (*Dynamic Indicators of Basic Early Literacy Skills*) (University of Oregon) are administered three times per year for students in K-2 by a team of educators, with the data used to drive instructional decisions and to identify students in need of extra support. Improvements in outcomes on *DIBELS* measures coincide with implementation of School-wide Positive Behavior Support. Implementation of SW-PBS began in 2006 and has been sustained to criterion through Spring of 2008. On the *DIBELS* measures, the number of students *at risk* or *at some risk* has declined significantly, while the number of students *at low risk* has increased. This has been demonstrated by cohorts of students over multiple years as they transition to new grade levels and also has been demonstrated at individual grade levels with different student groups over multiple years (see Appendices 4.3A, 4.3B, 4.3C, and 4.3D). *DIBELS* benchmark data have improved for both student

cohorts and the full student body (see Appendices 4.3E and 4.3F). Districts will likely continue the trend of recording and observing the relationship between academic achievement and implementation of SW-PBS during the upcoming years.

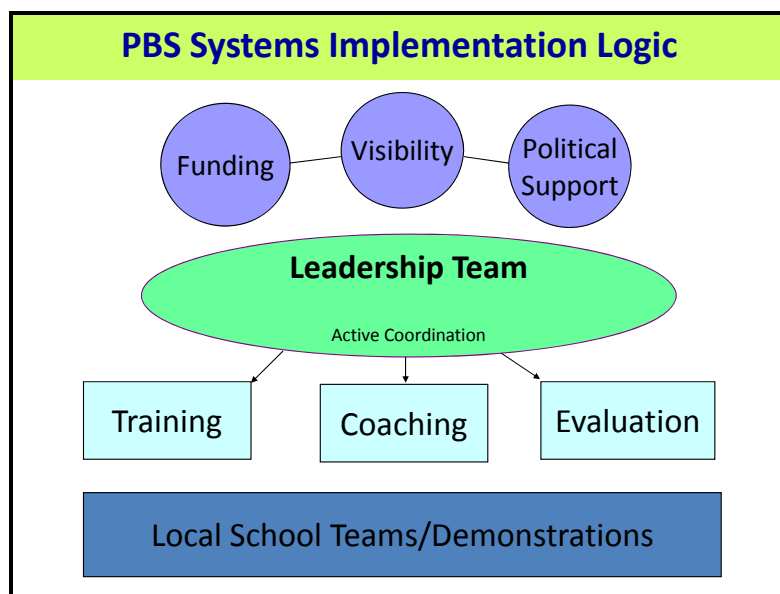

What is the current need/demand for School-wide PBS training and support in Connecticut?

Systems Needs:

Durable and adaptable School-wide PBS implementation requires systemic support that extends beyond the individual school. It is important to organize multiple schools (e.g., cluster, complex, district, county, state) so that a common vision, language, and experience are established. This approach allows districts and states to improve the efficiency of resource use, implementation efforts, and organizational management. An expanded infrastructure also enhances the district and state level support (e.g., policy, resources, competence) and provides a supportive context for implementation at the local level (Center on Positive Behavioral Interventions and Supports, 2005).

The essential features of a comprehensive statewide system of positive behavior and mental health support would include the following:

- **Statewide Leadership Team** that involves a variety of partners and stakeholders;
- **Coordination** through CSDE and SERC;
- Adequate and sustained **Funding Support**;
- **Visibility** and commitment to PBS;
- Relevant and effective **Political Support**;
- **Training Capacity** that expands beyond SERC and UConn;
- **Coaching Capacity** that expands beyond SERC and UConn;
- **Model Schools** that demonstrate effective implementation and sustainability; and
- **Program Evaluation** to ensure implementation fidelity and to measure outcomes.

(Ibid)

Local Demand:

Demand by Connecticut school districts for participation in School-wide Positive Behavior Support training has exceeded the resources available. The waiting list for districts interested in participating in training in 2009-2010 has reached 26 districts since summer 2008 (see Appendix 5). Given the success of PBS in reducing suspensions and expulsions, the demand is likely to increase as a result of the state's new guidelines for suspension and expulsion effective July 1, 2009. Connecticut needs to further the development of a coordinated, comprehensive, statewide system through the State Education Resource Center in collaboration with the University of Connecticut to address the behavioral and mental health needs of all Connecticut's children in order to ensure academic achievement and behavioral outcomes.

National Perspective:

Positive Behavior Support, funded nationally by the Office of Special Education Programs, continues to be implemented in 49 states and thousands of schools. Across the country, PBS is lauded for its data-driven approach to decision making. So now, more than ever, states like Connecticut must be prepared to expand implementation of PBS.

As a Senator, Barack Obama introduced the *Positive Behavior for Effective Schools Act* (S.2111) on September 27, 2007, while Representative Philip Hare (D-IL) introduced companion legislation in the House. The Bill would allow for states to use funds allocated for school improvement under Title I for School-wide Positive Behavior Support. It also would require improvements in school-wide learning environments, including SW-PBS, to be a target of:

- Technical assistance provided by states to local education authorities (LEAs) and schools, and by LEAs to schools identified as needing improvement;
- School-wide programs that allow LEAs to consolidate educational funds to upgrade the entire educational program of schools that serve a high proportion of low-income families;
- Professional development funding;
- Funding under the Safe and Drug-Free Schools and Communities program; and
- Elementary and secondary school counseling programs.

President Obama's early sponsorship of Positive Behavior Support in the Senate suggests that PBS will be an important part of his administration's education agenda as well. Another indicator is that his selection for Secretary of Education, Arne Duncan, formerly served as the Chief Executive Officer of the Chicago Public Schools, where implementation efforts for PBS continue. According to the Illinois PBS Network, as of June 2008, Illinois had nearly 900 schools using PBS, many of which are in Chicago (Illinois PBIS Network, 2008).

What are the goals for a Connecticut statewide SW-PBS system?

The three-year goals for a Connecticut statewide SW-PBS system include:

- Enhancing and building capacity for providing district-specific assistance in the development and management of secondary and tertiary behavior support systems and expertise of local personnel;
- Establishing a statewide educational system for training, coaching, and evaluation by building capacity in Regional Educational Service Centers and other professional organizations to address the growing number of PBS sites in Connecticut;
- Investigating further the local relationship between SW-PBS and academic outcomes;
- Identifying further a static funding source for scaling-up efforts; and
- Developing a model schools program to identify, support, and exhibit high-quality implementation sites with an emphasis on exemplary high schools.

Summary

Positive Behavior Support (PBS) involves a proactive, comprehensive, and systemic continuum of support designed to provide opportunities to all students, including students with disabilities and second language learners, to achieve social, behavioral, and learning success. The CT State Department of Education (CSDE), through the CT State Education Resource Center (SERC), has been providing training, technical assistance, coaching, and evaluation to CT school districts since 2000. The major findings from Positive Behavior Support implementation are:

- Since 2000, over 27 districts have trained schools in Positive Behavior Support, and over 125 schools have been trained.
- Connecticut schools and districts are experiencing positive outcomes in response to their initiation and implementation of School-wide Positive Behavior Support.
- Connecticut-trained schools that are utilizing the SWIS database system and have been evaluated using the SET have demonstrated clear reductions in office discipline referrals as a result of PBS implementation to criterion. When collected in SWIS, total office discipline referrals have been reduced for students with disabilities in addition to their general education peers.
- Many PBS schools in Connecticut have experienced a reduction in out-of-school suspension, in-school suspension, and expulsion rates.
- Connecticut schools recently began observing academic patterns related to implementation of Positive Behavior Support. Districts will likely continue the trend of recording and observing the relationship between academic achievement and implementation of SW-PBS during the upcoming years.
- Demand by Connecticut school districts for participation in School-wide Positive Behavior Support training has exceeded the resources available.
- Connecticut needs to further the development of a coordinated, comprehensive statewide system through the State Education Resource Center in collaboration with the University of Connecticut to address the behavioral and mental health needs of all Connecticut's children in order to ensure academic achievement and positive behavioral outcomes.
